                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
Series: IRAK Plate: 108 Row: o Column: 22
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 9937983.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This cDNA sequence codes for the p120 catalytic subunit (see AAW23948) of pig G-protein regulated phosphatidylinositol-3' kinase, a heterodimeric enzyme which produces the intracellular messenger phosphatidylinositol (3,4,5) triphosphate in response to activation of trimeric G protein-linked receptors. This novel protein, which cals contains a regulatory subunit, p101 (see AAV04633), is found in calso of haematopoletic origin and is involved in immune system responses which cause inflammation. p120 cDNA was obtained from a probe (see AAT99713) based on an isolated p120 tryptic peptide. The p120 cDNA clone in pcMN3mycpl20 is deposited as ATCC 97637. The invention encompasses pig and human p101 and p120 nucleotides, invention encompasses pig and human p101 and p120 nucleotides. AAW2346-49), fusion proteins, polypeptides and peptides, antibodies to these proteins, and transgenic animals and knockout animals. Compounds which are useful for treating inflammatory response disorders can be identified by screening assays using a G protein activated P13K, or a cultured host cell that expresses the p101 activated P13K, or a cultured host cell that expresses the p101 activated P13K, or a cultured host cell that expresses the p101 activated P13K, or a cultured host cell that expresses the p101 activated P13K, or a cultured host cell that expresses the p101 activated P13K, or a cultured host cell that as a separation at allergies, reperfusion injury, atherosclerosis, cancer and asthma, allergies, reperfusion injury, atherosclerosis, cancer and alternating and catted and allergies, day screening and clinical trial monitoring be used for disagnosis, drug screening and clinical trial monitoring be used for disagnosis, drug screening and clinical trial monitoring
                                                                                                                                                                                                                                                                                                                                                                                   DNA encoding G-beta-gamma regulated phosphatidyl-inositol-3' kinase, p101 and p120 subunits - useful for diagnosis, drug screening, clinical trial monitoring and treatment of inflammatory disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 3808 BP; 1010 A; 965 C; 953 G; 880 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence encodes a novel catalytic subunit, p120, from porcine phosphoinositide 3-hydroxykinase (P13K) which is regulated by beta-gamma subunits of trimeric G-protein. Nucleic acid coding for p101 or p120, or their fragments, are used as probes and primers for identifying p101 or p120 gene mutations, allelic variations or regulatory defects, particularly for the diagnosis of activation disorders (or susceptibility) in cells of the haematopoietic system. The related proteins, antibodies, agonists and antagonists can be used similarly. The p101 and p120 proteins, peptides or fusion proteins are used to treat or screen for potential agents for treating immune disorders, particularly spridcemen, as athmitis, septic shock, adult respiratory distress atherosclerosis, Alzheimer's disease and cancer.

The invention relates to the human pi01 regulatory protein.

The invention relates to the human pi01 regulatory protein.

Which is a subunit of the trimeric G-protein regulated phosphoinositide

Which his a subunit of the trimeric G-protein regulated phosphoinositide

SC 304-Kinase (PI3K). The pi01 regulatory protein can be used in screening

assays to detect compounds which can be used to treat inflammatory

response disorders. The compounds identified may be antagonists or gonists of G protein-regulated PI3K gene expression and/or pi01 or pi20

gene product activity. These compounds may then be used to control immune
system disorders, in particular arthritis, septic shock, adult

respiratory distress asthma, allergies, repeticion injury,

atherosclerosis, Alzheimer's disease and cancer. Pi01 proteins and

peptides can be used in the detection of mutant or inappropriately

axpressed pi01 regulatory subunits for the diagnosis of immune disorders

and haematopoietic lineage cell activation disorders which will also

assist in devising a proper treatment or therapeutic regime. Using

compounds which affect the signal transduced by the activated pi01

regulatory subunit to be identified.
                                                                                                                                               trimeric G-protein regulated Pi3K, phosphoinositide 3OH-kinase; asthma; inflammatory response disorder; arthritis, septic shock, allergy; adult respiratory distress; cancer; reperfusion injury; atherosclerosis; Alzheimer's disease; haematopoietic lineage cell activation disorder;
                                                                                                                                   system disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated p101 regulatory polypeptide, a subunit of the trimeric G-protein regulated P13K, is useful for screening compounds which can be used to treat inflammatory response disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BP; 1010 A; 965 C; 953 G; 880 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence encodes a novel catalytic subunit, p120, from human phosphoinostides 3-hydroxykinase (P13K) which is regulated by beta-gamma subunits of trimeric G-protein. Nucleic acid coding for p101 or p120, or their fragments, are used as probes and primers for identifying p101 or p1210 gene mutations, allelac variations or regulatory defects, particularly for the diagnosis of activation disorders (or susceptibility) in cells of the haematopoietic system. The related proteins, antibodies, agonists and antagonists can be used similarly. The proteins, antibodies, agonists and antagonists can be used similarly. The p101 and p120 proteins, peptides or fusion proteins are used to treat or screen for potential agents for treating immune disorders, particularly syndrome, pneumonia, asthma, allergies, reperfusion injury, attherosclerosis, Alzheimer's disease and cancer.
                                                                                                                                                                                                                   Phosphoinositide 3-hydroxykinase; PI3K; trimeric G protein; human; adapter subunit; regulatory subunit; p101; p120; catalytic subunit; detection; diagnosis; activation disorder; haematopoletic system; treatment; immune disorder; inflammation; arthritis; septic shock; adult respiratory distress syndrome; pneumonia; asthma; allergy; reperfusion injury; atherosclerosis; Alzheimer's disease; cancer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acid encoding regulatory (p101) and catalytic (p120) subunits of a heterodimeric phosphatidylinositol.3' kinase - useful in treatment and diagnosis of immune system disorders, e.g. arthritis, cancer and Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      BP; 1471 A; 1173 C; 1149 G; 1367 T; 2 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence encodes the human pl20 regulatory protein.

The invention relates to the human pl01 regulatory protein.

The invention relates to the human pl01 regulatory protein.

Which is a subunit of the trimeric G-protein regulated phosphoinositide

30H-kinase (PI3K). The pl01 regulatory protein can be used in screening
assays to detect compounds which can be used to treat inflammatory
response disorders. The compounds identified may be antagonists or
agonists of G protein-regulated PI3K gene expression and/or pl01 or pl20
gene product activity. These compounds may then be used to control immune
system disorders, in paritualar arthritis, septic shock, adult
respiratory distress, asthma, allergies, reperfusion injury,
atherosclercsis, Alzheimer's disease and cancer. pl01 proteins and
peptides can be used in the detection of mutant or inappropriately
expressed pl01 regulatory subunits for the disorders which will also
and haematopoietic lineage cell activation disorders which will also
genetically engineered host cells to screen for compounds also allows
compounds which affect the signal transduced by the activated pl01
                                                                                                                                                                                                                                    pl01 protein; pl20 protein; regulatory subunit; immune system disorder; trimeric G-protein regulated Pl3K; phosphoinositide 30H-Kinase; asthma; infllammatory response disorder; arthritis; septic shock; allergy; adult respiratory distress; cancer; reperfusion injury; atheroselerosis; Alzheimer's disease; haematopoietic lineage cell activation disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated p101 regulatory polypeptide, a subunit of the trimeric G-protein regulated P13K, is useful for screening compounds which can be used to treat inflammatory response disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           BP; 1471 A; 1173 C; 1149 G; 1367 T; 2 other;

Also described is an array of nucleic acid polymers immobilised on a solid support, comprising a solid support, at least two different mucleic acid polymers which are each specific for a different gene associated with lipid metabolism, synthesis or action, where each nucleic acid polymer is located at a predetermined position on the solid support, and the array comprises nucleic acid polymers which are specific for less than 100 genes other than the selected genes. The method is useful for determining tumour characteristics in a tissue sample taken from a patient. The present sequence represents a human lipid-associated gene

                                                                                                                                                                                                                                                                                                                                          8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to identifying a modulator of the phosphatidylinositol 3-kinase (PI3K; pilodelta) enzyme that binds to the catalyric subunit via a SH3 domain-containing polypeptide such as LASP-1. Also described are methods of assaying the specific binding affinity of the PI3 kinase binding partner. Such modulators are useful for the treatment of diseases characterised by the undesirable or excessive activity of PI3Kdelta. For example the modulators can be used for inhibiting the growth or proliferation of cancer cells (e.g. malignant neoplasms of lymphoid and reticuloendothelial tissues, Hodgkin's lymphoma, leukaemias), inflammatory diseases (e.g. rheumatoid autoimmune diseases (e.g. systematic lupus erythematosus), inflammatory bowel diseases (e.g. chronic inflammatory bowel disease), inflammatory destantoses (e.g. contact dermatitis; central or peripheral nervous catalogram inflammatory disorders (e.g. maningitis), bacterial pneumonia, and Type I diabbetes mellitus. The present sequence encodes for human

The amplified fragment was used to probe a human usymptocal color several overlapping clones were isolated. The largest clone coded for a protein of 1049 residues. The protein is a novel phosphatidylinositol 3-kinase (PISK) that differs in its regulatory mechanism from the known PISK alpha and -beta enzymes. The new enzyme has been designated PISK-damma. Another clone, coding for a PISK-gamma of 1050 residues and hadring the present sequence, was then isolated. The enzyme can be used as an immunogen. The enzyme, antibodies against it or nucleic acid encoding it can be used for modulating cell proliferation, receptor-mediated signal transport and anti-lipolytic activity or for treating.

The amplified fragment was used to probe a human 1937 cell cDNA library and several overlapping clones were isolated. The largest clone had the present sequence and coded for a protein of 1049 residues. The protein is a novel phosphatidylinositol 3-kinase (PISM) that differs in its regulatory mechanism from the Known PISK-alpha and differs in its regulatory mechanism from the designated PISK-gamma and can be used as an immunogen. The enzyme, antibodies against it or nucleic acid encoding it can be used for modulating cell proliferation, receptor-mediated signal transmission, histamine secretion, nerve cell differentiation, glucose transport and anti-lipolytic activity or for treating Alzheimer's disease.

021 ArgHisHisThrAshLeuLeuIleIleLeuPheSerMetMetLeuMetThrGlyMetPro 1040		257012 AAQS7012 standard; cDNA to mRNA; 3498 BP. AAQS7012; 25-MAR-2003 (updated) 31-AUG-1994 (first entry)	PtdIns 3-kinase 110 kD catalytic subnit cDNA.  110 kD catalytic subunit; phosphatidyl inositol 3-kinase; transformation; Schizosaccharomyces pombe; nmt promoter; thiamine; Ptdins 3-kinase; assay; detection; cell growth; regulation; cancer; blood vessel plaques; ss.  Bos taurus.	Key Location/Qualifiers CDS 13207	(IMCR.) IMPERIAL CANCER RES TECHNOLOGY.  Goode NT, Nurse PM, Parker PJJ, Waterfield MD;  WPI; 1994-065697/08.	Pure pure cells transformed with mammalian phospholipid or protein kinase DNA - useful in assays for compounds involved in protein kinase DNA - useful in assays for compounds involved in cell growth regulation and for treating cancers  XX  Disclosure, Fig 1; 71pp; English.  XX  CC  This sequence encodes the 110 kD catalytic subunit of the phosphatidyl control (PtdIns) 3.kinase. This sequence was transformed into control (PtdIns) 3.kinase. This sequence was transformed into control control of the invention. In the presence of this mine the promoter is inactive and the cells carrying the PtdIns catalytic subunit plasmid grow as the parental strain. In the absence control of thiamine the nmt promoter functions and the PtdIns 3.kinase catalytic subunit in induced. PtdIns activity is substantially

                    the array comprises nucleic acid polymers which are specific for less than 100 genes other than the selected genes. The method is useful for determining tumour characteristics in a tissue sample taken from a patient. The present sequence represents a human lipid-associated generalated cDNA sequence, which is used in the exemplification of the

Also described is an array of nucleic acid polymers immobilised on a solid support, comprising a solid support, at least two different nucleic acid polymers which are each specific for a different gene associated with lipid metabolism, synthesis or action, where each nucleic acid

The present invention relates to identifying a modulator of the phosphatidylinositol 3-kinase (P13K; pl10delta) enzyme that binds to the catalytic subunit via a SH3 domain-containing polypeptide such as inASP-1. Also described are methods of assaying the specific binding affinity of the P13-kinase binding partner. Such modulators are useful for the treatment of diseases characterised by the undesirable or excessive activity of P13Kdelta. For example the modulators are useful for inhibiting the growth or proliferation of cancer cells for inhibiting the growth or proliferation of cancer cells. Hodgkin's lymphoma, leukaemiso, inflammatory diseases (e.g. rheumatoid arthitis), ophthalmid disorders (e.g. allorgic conjunctivitis), arthitis), ophthalmid disorders (e.g. allorgic conjunctivitis), obvel diseases (e.g. chronic inflammatory bowel disease), inflammatory dermatinis, central or peripheral nervous system inflammatory disorders (e.g. meningitis), bacterial pneumonia, and Type I diabetes mellitus. The present sequence encodes for human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    306
